## SourceTree3.1.3跳过注册的方法

1.下载并执行SourceTreeSetup-3.1.3.exe,会进入登录或注册bitbucket的界面,先别急着操作,继续往下看。

2.关闭上述安装窗口,打开 %LocalAppData%\Atlassian目录(win+r打开命令模式,把%LocalAppData%\Atlassian放到输入框,回车即可),接着进入SourceTree目录,创建 accounts.json文件,并修改accounts.json内容如下:

```
[
2
       {
         "$id": "1",
         "$type": "SourceTree.Api.Host.Identity.Model.IdentityAccount,
     SourceTree.Api.Host.Identity",
 5
         "Authenticate": true,
         "HostInstance": {
           "$id": "2",
 7
           "$type": "SourceTree.Host.Atlassianaccount.AtlassianAccountInstance,
 8
     SourceTree.Host.AtlassianAccount",
9
           "Host": {
             "$id": "3".
10
             "$type": "SourceTree.Host.Atlassianaccount.AtlassianAccountHost,
     SourceTree.Host.AtlassianAccount",
             "Id": "atlassian account"
12
           },
13
           "BaseUrl": "https://id.atlassian.com/"
14
15
         },
         "Credentials": {
16
           "$id": "4",
17
           "$type": "SourceTree.Model.BasicAuthCredentials, SourceTree.Api.Account",
18
           "Username": "",
19
           "Email": null
20
```

```
21 },
22 "IsDefault": false
23 }
24 ]
```

3.打开 %LocalAppData%\Atlassian,进入"SourceTree.exe\_Url\_iayhtc13zv3obzuz5vchezjs1az2q5ef"(注该目录可能和版本相关,不同版本的路径可能不完全一样。)

接着进入"3.1.3.3158"目录,打开user.config文件,在里面加入六行代码。

```
version="1.0" encoding="utf-8"
  configuration>
                            e="AgreedToEULA" serializeAs="String">
                  <value>True</value>
             <value>b7f1e5ac-14ae-45dc-acf1-07bf202e90b0</value>
              </setting>
              <setting nam
                  <value>06/24/2019 11:16:12
              <setting name="SSHClientType" serializeAs="String">
                  <value>PuTTY
              </setting>
             <setting name="ProxyServerMode" serializeAs="String">
                 <value>OperatingSystem</value>

                  <value>Update
             </setting>
             <setting name="AnalyticsHasAgreed" serializeAs="String">
                  <value>True
             </setting>
             <setting name="AasLastSubmitted" serializeAs="String">
                  <value>06/24/2019 11:16:10
         </SourceTree.Properties.Settings>
</configuration)
```

4.再次执行SourceTreeSetup-3.1.3.exe,此处可能会出现如下二种情况,

情况一就进入下一步安装。

情况二:弹出Mercurial询问窗口,可以根据实际情况做相应的选择,比如使用默认选项下载Mercurial,或者使用第四个选项"我不想使用Mercurial"。直接用第一个选项即可!
